

Milestone #: 3

Date: October 29th 2022

Group Number: 50

Name	Student Number	CS Alias (Userid)	Preferred Email Address
Lucas Amar	37082823	la370828	lucasamar5@gmail.com
Steven Slater	46173688	i217k	s2063615@ed.ac.uk
David Perez	25984360	dperez02	david.perez18@estudiant.upf.edu

By typing our names and student numbers in the above table, we certify that the work in the attached assignment was performed solely by those whose names and student IDs are included above. (In the case of Project Milestone 0, the main purpose of this page is for you to let us know your e-mail address, and then let us assign you to a TA for your project supervisor.)

In addition, we indicate that we are fully aware of the rules and consequences of plagiarism, as set forth by the Department of Computer Science and the University of British Columbia

Milestone 3: Timeline

Back-End (Deadline – November 12th) – (Steven primary with the support of the team)

- Create our oracle accounts
- Create tables using SQL statements
- Provide screenshots of this
- Upload the working SQL to the gitHub repository
- Make sure the database works for the queries that it will be used for from milestone 4
- Provide our project description alongside this.

Integration (Deadline – November 24th) – David (primary with the support of the team)

- Done in PHP
- We need to learn and use online materials, so the group members can learn and use PHP in the project
- Will provide all of the data functionality to the front end
- Successfully integrate the database with our front GUI view (HTML+CSS)
- Commit code for the PHP successfully to our GitHub

Front-End (Deadline – November 24th) – Lucas (primary with the support of the team)

- GUI done in View
- Decide how we are going to design the GUI
- Creating our GUI to be able to deliver all of the queries
- Testing that the queries work and the output is the correct output.
- Commit code for the PHP successfully to our GitHub

Description of Challenges:

We managed to figure out how to connect to SQL*Plus, which was a big hurdle for us as we were exchange students who were unfamiliar with the remote ubc server setup.

Now we have done that Steven has begun creating the database, and will commit the SQL to the github that creates it.

Description of Tasks Left to Do:

David is currently learning how to write PHP, to help with his part of integration. Lucas is learning from the view website which will be our front end, as it is HTML, CSS and Javascript, it will help add some functionality to the GUI when the user is querying the data.
